

arcAccess

arcAccess - hands free access (Incorporating arcAssets)

The next step in improving access control, arcAccess allows for safe hands free access using encrypted RFID technology to open booms and gates into security complexes and areas.

arcAccess is a solution that is tailored to meet the exact security requirements of each site taking into account the unique nature of each community seeking to optimise their security.

As an added benefit the solution can be extended to provide coverage of the entire complex to provide coverage for all the high value movable assets on the site.

*Because YOU deserve hassle free access
without compromising safety!*

manage your access
