arcSight

arcSight - Supply Chain Visibility

The next step in improving supply chain efficiencies and removing costly delays is to implement a system that provides real time visibility of the supply chain.

arcSight is a solution that can be tailored to meet the ever increasing pressure of todays supply environment. The system can also be fully integrated into the existing systems, thereby enhancing and protecting the existing investment in IT.

Moving away from micro-managing the supply chain through monitoring steady state processes, arcSight uses proven RFID technology to create transactions, the solution manages escalations via client defined rules to highlight the areas that require attention.

Because you can manage what you see!

manage your supply
