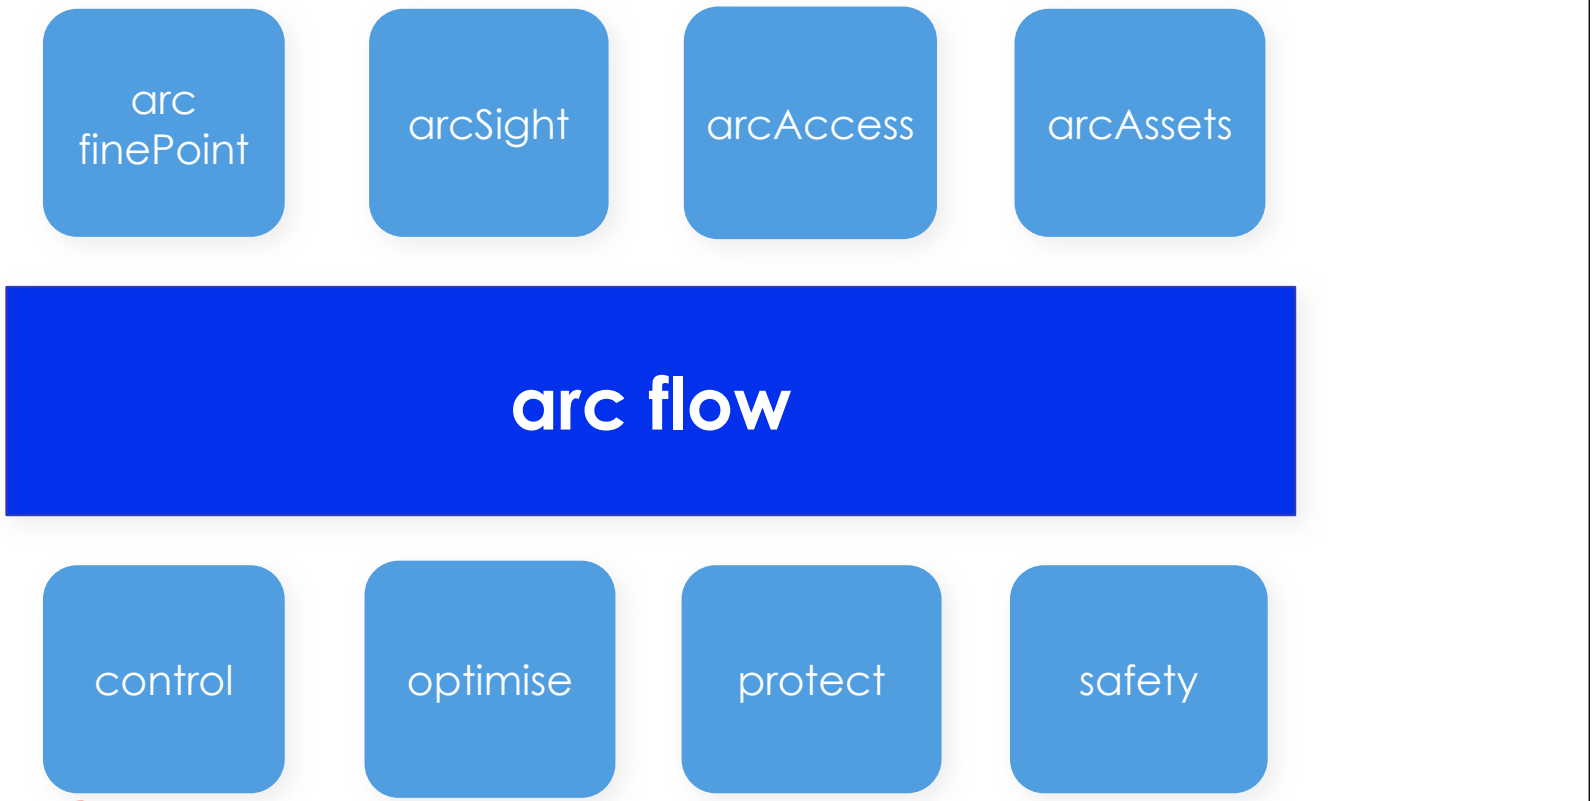
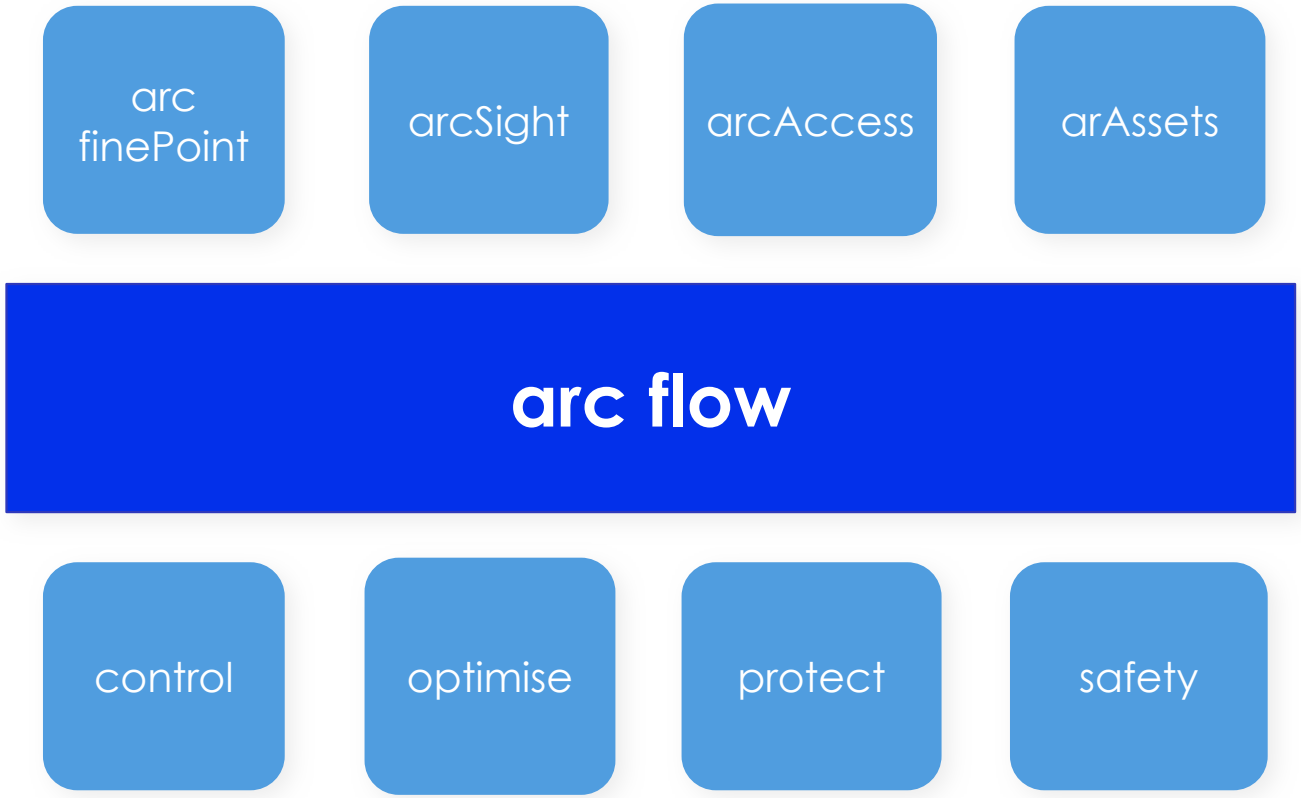
- ✓ Integrated process flow
- ✓ Client defined rules & procedures
- ✓ Client defined outcomes
- ✓ Escalation's via SMS and /or email

system overview



Fully integrated asset management

system overview



system overview

finePoint

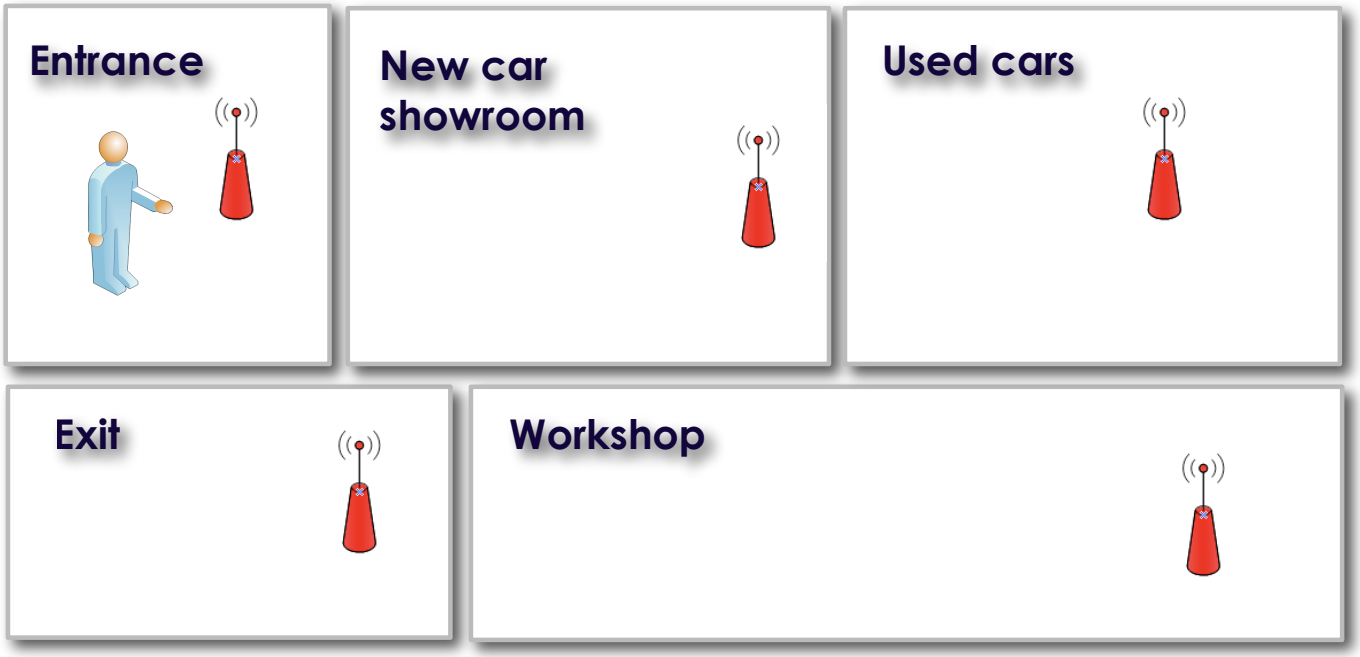
Manage stock and fines

real time

arcSight

Solution implementation

implementation



Install reader network

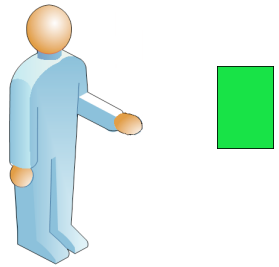
implementation

Fit tag with

tamper/removal notification

No wiring or power source required

implementation



Issue tag to each sales person for vehicle use

arcSight

Solution in action

solution in action

Client requests a test drive

Client's Licence is scanned into system

Car and sales person selected

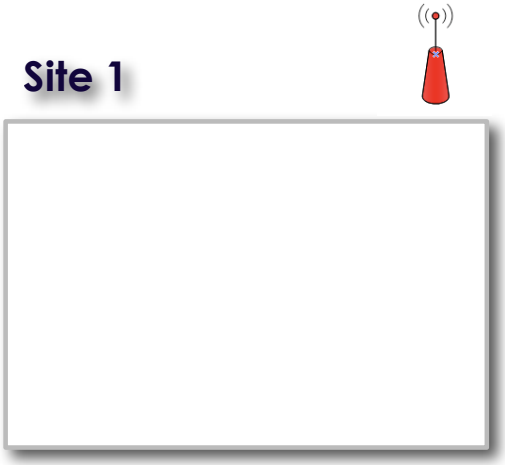
Car cleared to leave on demo

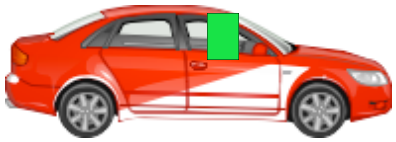
solution in action

Car leaves - Car tag, driver tag and driver Licence - conditions met

Demo logged time left and time returned

solution in action





If car leaves without the clients licence, trip is logged to the authorised driver

If no authorised driver tag is read then an alarm is raised

solution in action

- Fines logged electronically
- finePoint identifies the driver
- The fine is then reallocated via finePoint to the actual driver
- The council reissues the fine directly to the driver
- This is done within a period of days

benefits

Automation - *System generated events*

Integrity - *Consistent response with each parameter*

Velocity - *As it happens – truly real time*

Insight - *Learn from system*

Capability - *Improved resource allocation*

benefits

Reduce the cost of fines
Fines and points allocated to the correct driver

Automated Real Time notification of

- Stock location
- Stock arrival
- Stock offsite
- Demo management/sales activity

benefits

Ability to grow the system into the operation to include

- Live stock management - new and used
- Management of clients vehicle in for service
- Other asset management - Computers and equipment
- Reduce risk of theft and unauthorised use of vehicles

covering your assets
